

# User Manual (ZigBee Gateway(Wireless) R7070-V2)

## Introduction

Tuya Smart ZigBee Gateway is a central to connect different zigbee sub devices, it also can bridge zigbee devices to Wi-Fi router.

Offline working: even the zigbee smart gateway disconnect to Wi-Fi, the zigbee devices connected to gateway still can communicate with each other, for instance, the zigbee wireless mini switch turn on zigbee light bulb.

## Installation

1. It is recommended to put the smart zigbee gateway at the central of your house, so that it's signal can cover most of zigbee devices. The common connection distance between gateway and zigbee device is 10m to 30m in door depends on the obstacle.
2. The smart zigbee gateway can add up to 50 zigbee devices, including light bulb, smart plug, light switch sensors, radiator valves, smart lock, and more.

## Set up the zigbee gateway with Tuya smart app

1. Download and install the app "Fakro smart" or "Tuya app"
2. Launch the app "Fakro Smart" or "Tuya smart"
3. Create a new account or log in to your existing account.
4. Turn on Bluetooth.
5. Tap "+" to add the new device.
6. The ZTG Gateway will appear on the screen as a "nearby device".
7. Register device to your account.

If you have problems adding, reset the device by pressing the reset button for 5 seconds.

## Specyfication
